dayforce

Job Title: Intern Developer
Department: Product & Technology
Work Term & Duration: 6 months (Jan-July 2027)
Location: Dayforce India Pvt Ltd., - Hebbal, Bengaluru

Dayforce is a global leader in Human Capital Management technology. Simply put, we allow our customers to do the most complex things well (HR, Payroll, Benefits Administration, Workforce Management and Talent Management) and do them on the scale. **Makes Work Life Better™** is our brand promise, not only to our customers, but to our employees as well. Our flagship platform, Dayforce, helps leaders make smart decisions based on data, strategy and intelligence that create value and maximize productivity.
We understand that no matter where you are, choosing a new employer is always one of life's most stressful events. We encourage you to check us out at Dayforce.com to learn more about how we are impacting the world of work for our customers, employees and you!

Benefits for Students:

- Experience working for one of the fastest growing Human Capital Management technology companies in the world Access to Dayforce's development programs and resources
- Ability to work with as well as create relationships with members across the globe
- Autonomy to bring forth new ideas and optimize existing structures within the organization
- Meaningful responsibilities, enabling you to obtain 'real-world' experience
- Dynamic hands-on exposure to multiple business-units and stakeholders across Dayforce

Summary:
Contribute to software design and software development. Collaborate with other team members in creating secure and reliable software solutions.

Primary Responsibilities

- Smart and driven individual who is passionate about learning new technologies and building high-quality cloud applications
- Developing applications (coding, programming)
- Debugging and testing code
- Documenting and testing new software applications
- Researching, investigating and fixing a wide range of technical issues
- Collaborating with senior leaders
- Approaching problems and creating solutions
- Proactively learning about new technologies

Must-Have Skills

- Good understanding of programming fundamentals and proficiency in at least one programming language such as C#, Java, Python, or JavaScript.
- Good understanding of Data Structures, Algorithms, Object-Oriented Programming (OOP), and fundamental problem-solving concepts.
- Basic understanding of Generative AI and Large Language Models (LLMs), including their capabilities, limitations, and common software development use cases.

dayforce

- Demonstrated interest and **self-learning in AI/Generative AI beyond simply using AI tools**, through personal projects, academic work, hackathons, prototypes, or independent experimentation.
- Experience using **AI-assisted development tools** such as GitHub Copilot, ChatGPT, Claude, Gemini, or similar tools for coding, debugging, testing, learning, and problem-solving, with the ability to **understand and validate AI-generated outputs**.

Good-to-Have Skills

- Hands-on exposure to **building AI/GenAI-powered applications or prototypes**, such as chatbots, intelligent assistants, search/Q&A applications, automation tools, or other AI-enabled features.
- Exposure to **LLM APIs** and integrating AI models into applications using APIs or SDKs.
- Basic understanding of GenAI concepts such as **prompt engineering, tokens, context windows, hallucinations, embeddings, vector search, and Retrieval-Augmented Generation (RAG)**.
- Exposure to emerging AI application development concepts such as **AI agents, tool/function calling, MCP, vector databases, or AI workflow/orchestration frameworks**.
